

NEWTON - Supply Chain Management solution

INTRODUCTION

In today's rapidly changing business environment, ever-greater demands are being placed on business

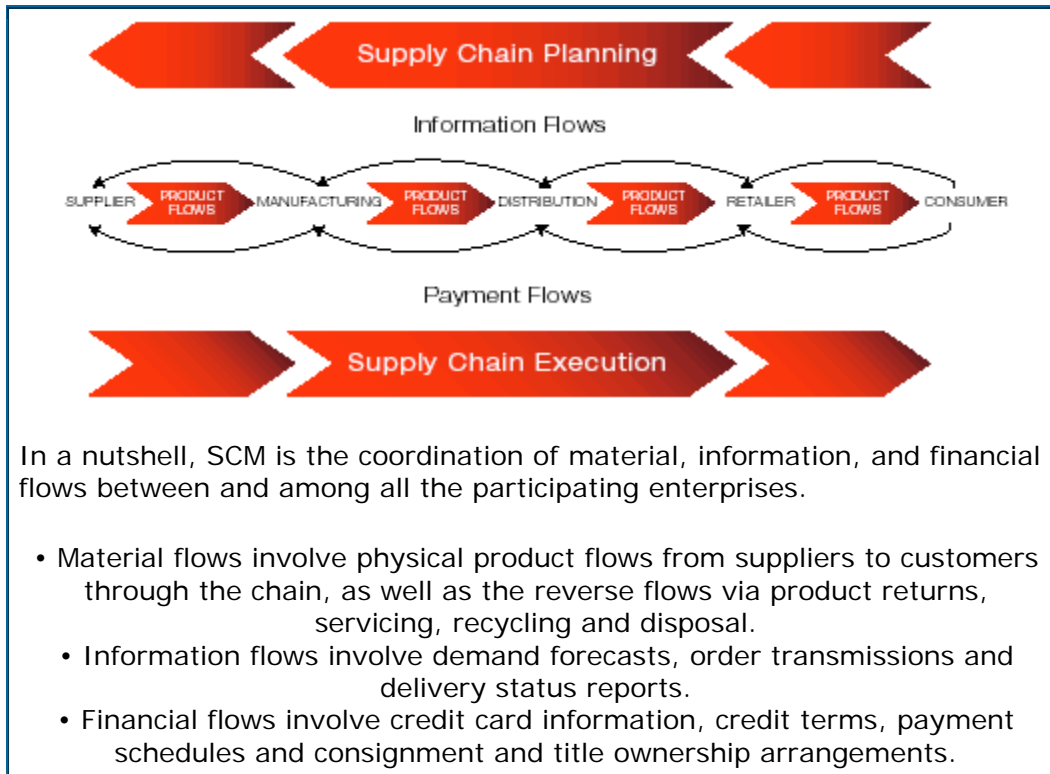

- to provide products and services quicker
- to offer greater value addition
- to provide products at the needed location on time

Commercial Vendors want proven quality, design, innovation, choice, Convenience and service, coupled with less financial spending risk, effort, and time. The supply chain of a company consists of different departments, ranging from procurement of materials to their customer service.

Supply Chain Management means a transformation of a company's "*supply chain*" into an optimally efficient, customer-satisfying process, where the effectiveness of the total supply chain is more important than the effectiveness of each individual department.

NEWTON SCM is an integrated software solution that helps Manufacturers /Distributors to collaborate with their stockists/distributors to develop reliable demand forecast and manage stocks that expire in the near future, create optimal production schedule, manage transportation and warehouse efforts. It optionally uses networking technology to link suppliers, distributors, and other business partners to optimize the business forecasts, while feeding real-time data about customer demand into the system. The customer demand variations that creep into the system can be analyzed to make a realistic forecast for ordering and stocking at various levels.

(Supply Chain Management)
